

Objectives & Analysis

◆ Objective 1: Average Calories Burned by Workout Type

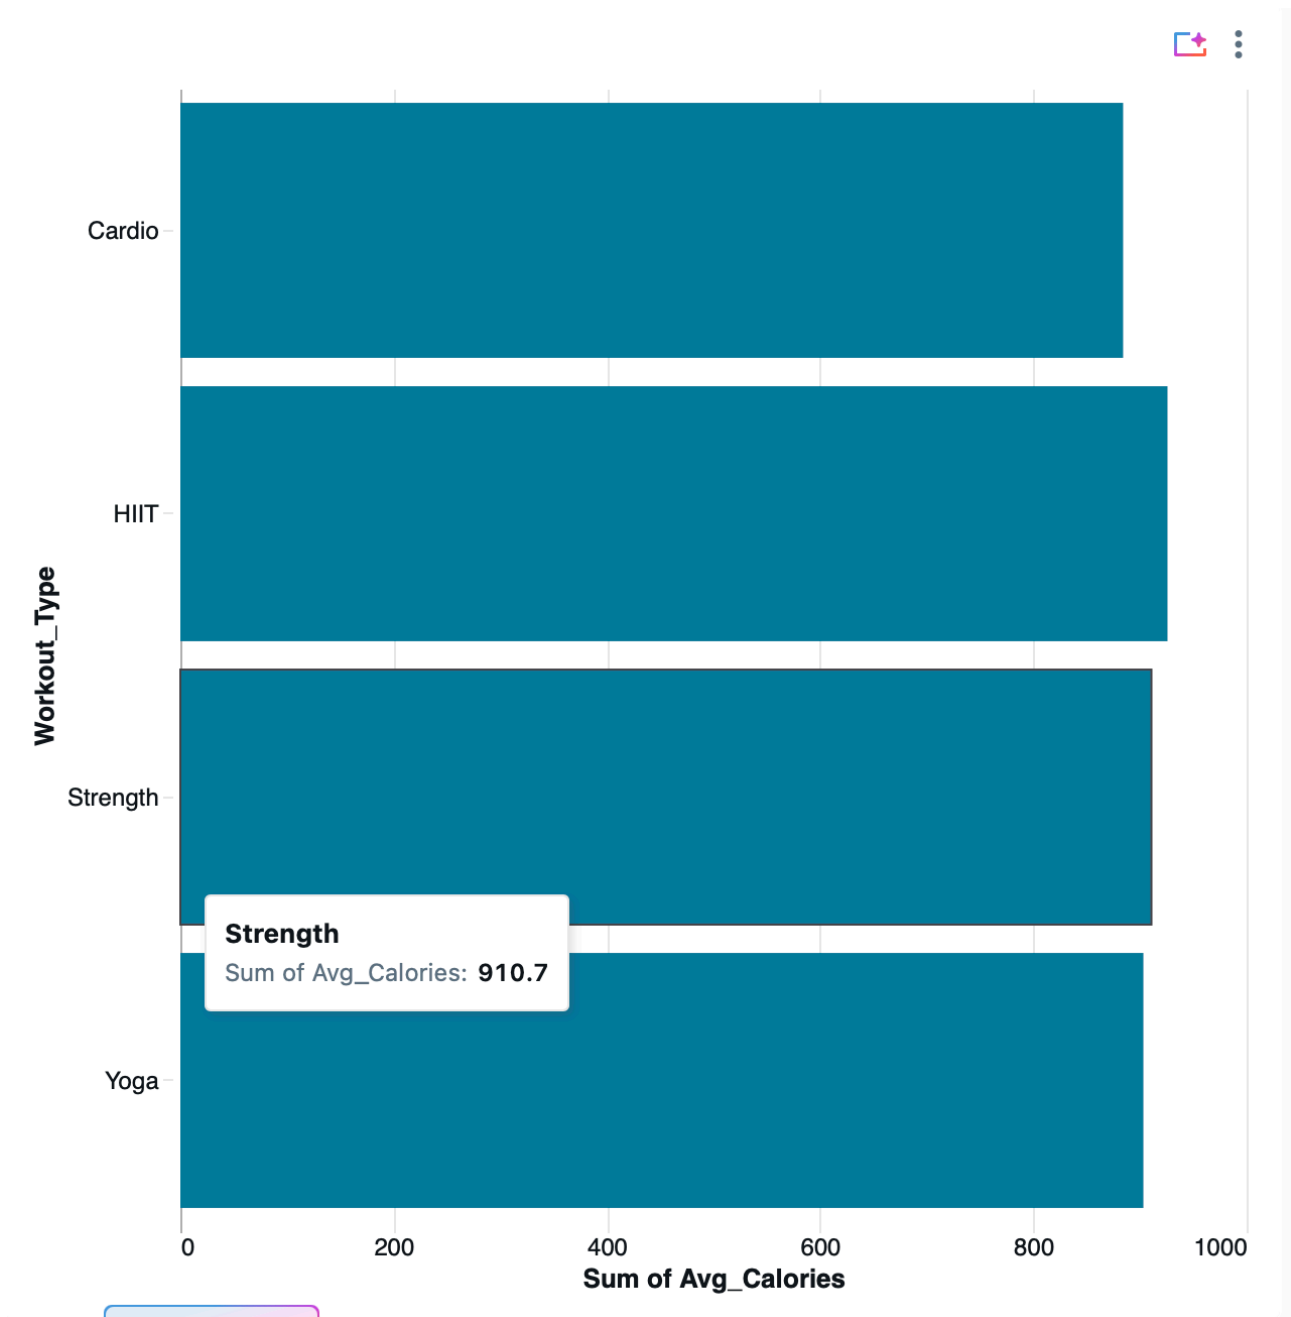

SQL Version

```
SELECT
Workout_Type,
AVG(Calories_Burned) AS Avg_Calories
FROM gym_members
GROUP BY Workout_Type
ORDER BY Avg_Calories DESC;
```

```
from pyspark.sql import functions as F
```

```
obj1 = df2.groupBy("Workout_Type") \
    .agg(F.avg("Calories_Burned").alias("Avg_Calories")) \
    .orderBy("Avg_Calories", ascending=False)
```

```
display(obj1)
```

Objective 2: Number of Exercises per Muscle Group

SQL Version

```
SELECT
    Category AS Muscle_Group,
    COUNT(*) AS Number_of_Exercises
FROM workspace.default.workout_lookup
GROUP BY Category
ORDER BY Number_of_Exercises DESC;
```

```
obj2 = df1.groupBy("muscle_gp") \
    .count() \
```

```
.withColumnRenamed("count", "Number_of_Exercises") \
.orderBy("Number_of_Exercises", ascending=False)
```

```
display(obj2)
```
